The Ozzi Method: Daily Governance for AI-Assisted Business

A Step-by-Step Operating System for Solo Founders and Sales Operators

> Lite Edition (Lead Magnet)

Disclaimer

This is operational education. Not legal, financial, or compliance advice.

---

1) The problem: execution is not a motivation issue

Most small businesses fail to compound because execution is inconsistent.

The usual response is “work harder” or “use better tools.” Both miss the lever that matters:

Governance.

Governance is the set of routines and rules that decide: - what gets done daily, - what gets reviewed weekly, - what gets escalated immediately, - and what gets ignored.

When you install governance, your output stabilizes.

---

2) What an Operator Agent is (in plain terms)

An **Operator Agent** is an AI assistant configured to run your business cadence.

It does not “replace” you. It replaces *the gaps between intentions and actions*: - reminding, logging, checking, and summarizing, - running checklists, - keeping the system honest.

In Project 100K terms: the Operator Agent protects margin, protects focus, and enforces a weekly compounding loop.

---

3) Minimum viable stack (60–90 minutes)

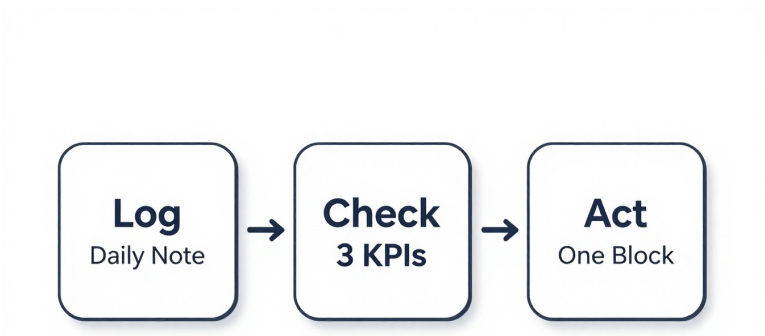
You need: - **OpenClaw** as the agent runtime - **Telegram** as the control channel - A workspace structure (daily logs + simple pipeline)

Optional (later): website landing pages, checkout, and automation.

---

4) The daily governance loop (the first win)

Run this loop once per day.



Daily Governance Loop (Log → Check → Act)

Step A — Daily Note (5 minutes)

Log: - Revenue (if any) - Leads added/contacted - Calls booked - One decision made - One risk - One next action

The point is not journaling. The point is **state**. If the agent has no state, it cannot operate.

Step B — KPI sanity check (2 minutes)

Pick 3 numbers only: - inbound leads today - outbound sent today - calls booked this week

Step C — Next actions (10 minutes)

Choose one: - outbound block (send 20 messages) - follow-up block (clear replies) - asset block (ship one piece: page, offer, script)

Rule: one block per day beats 10 half-finished tasks.

---

5) The basic escalation rule

You need exactly one escalation threshold on Day 1:

If **no leads are added for 48 hours**, escalate.

Escalation means: - change one acquisition input (list, offer, channel) within 24 hours.

---

6) What to do next (upgrade path)

This Lite edition gets you the first loop.

The **Premium edition** installs the full Ozzi Protocol: - heartbeat governance and risk thresholds - lead tracker + pipeline stages - experiments system - publishing system - templates + scripts + landing page + checkout wiring

Get the Lite assets + WhatsApp follow-up

When you download this Lite edition from the landing page, you'll be asked for: - Email - WhatsApp number

That's how the Operator Agent can send you the next steps and upgrades.

Appendix — Implementation notes (OpenClaw-first)

If you're building this in OpenClaw: - create a dedicated agent persona - define your daily note location - define your escalation thresholds - keep your first loop narrow (daily note + KPI check + next action)

Do not start by automating everything. Start by making governance impossible to skip.
